Abstract

Thermoplastic molding composition and moldings produced therefrom

A thermoplastic molding composition is described comprising a) from 20 to 99% by weight of a thermoplastic polymer other than a polyoxymethylene homo- or copolymer, from 0.1 to 80% by weight of a filler and/or reinforcing material, and c) 0.00001 to 1.0% by weight of a catalyst which catalyzes the formation of covalent bonds between the thermoplastic polymer and the surface of the additive.

The inventive molding compositions have improved properties.
